

Advanced polymer
technologies for can and coil.

Building a circular future, together.

The demand for more circular solutions is rising at a faster pace than ever before as the world collectively strives to tackle today's global challenges. Climate change, population growth, urbanization, digitalization and mobility are pushing players from every sector to find more sustainable solutions and to lay the foundations for climate neutrality by driving a Circular Economy. The challenge is not only to create these circular solutions, but also to maintain quality, durability and productivity.

Innovation is key to satisfying these demands and creating added value for customers, society and the environment by turning targets into realities. At Covestro, our long-standing expertise in aliphatic and aromatic polyisocyanates and more sustainable resins goes hand-in-hand with our purpose to constantly push boundaries in the search for future-oriented solutions. Through joint solutions, alternative raw materials, innovative recycling, and harnessing renewable energy, we're enabling coatings and adhesives producers to meet the circular challenge, here and now.

We're expanding our portfolio to include bio-based or recycled raw materials in coatings, adhesives, and specialty areas from cosmetics to textiles and 3D printing. Thanks to our mass balancing approach, we're helping close the loop by gradually replacing fossil fuels with ISCC-certified renewable resources. Our drop-in solutions ensure the high quality, consistent performance and easy processing that keep your production running smoothly. And we're constantly working to provide the global support, facilities and supply chain security you need to forge yet more circular innovations in infrastructure, automotive, furniture and more.

Material solutions can help turn circular targets into realities. Let's make the world a brighter place, together.

Can and coil.

Based on our strong collaborative partnerships with customers and our unique understanding of materials science and applications, we provide creative solutions for metal coating markets worldwide. Inspired breakthroughs that meet our customers' challenges and improve people's lives – now and for many generations to come.

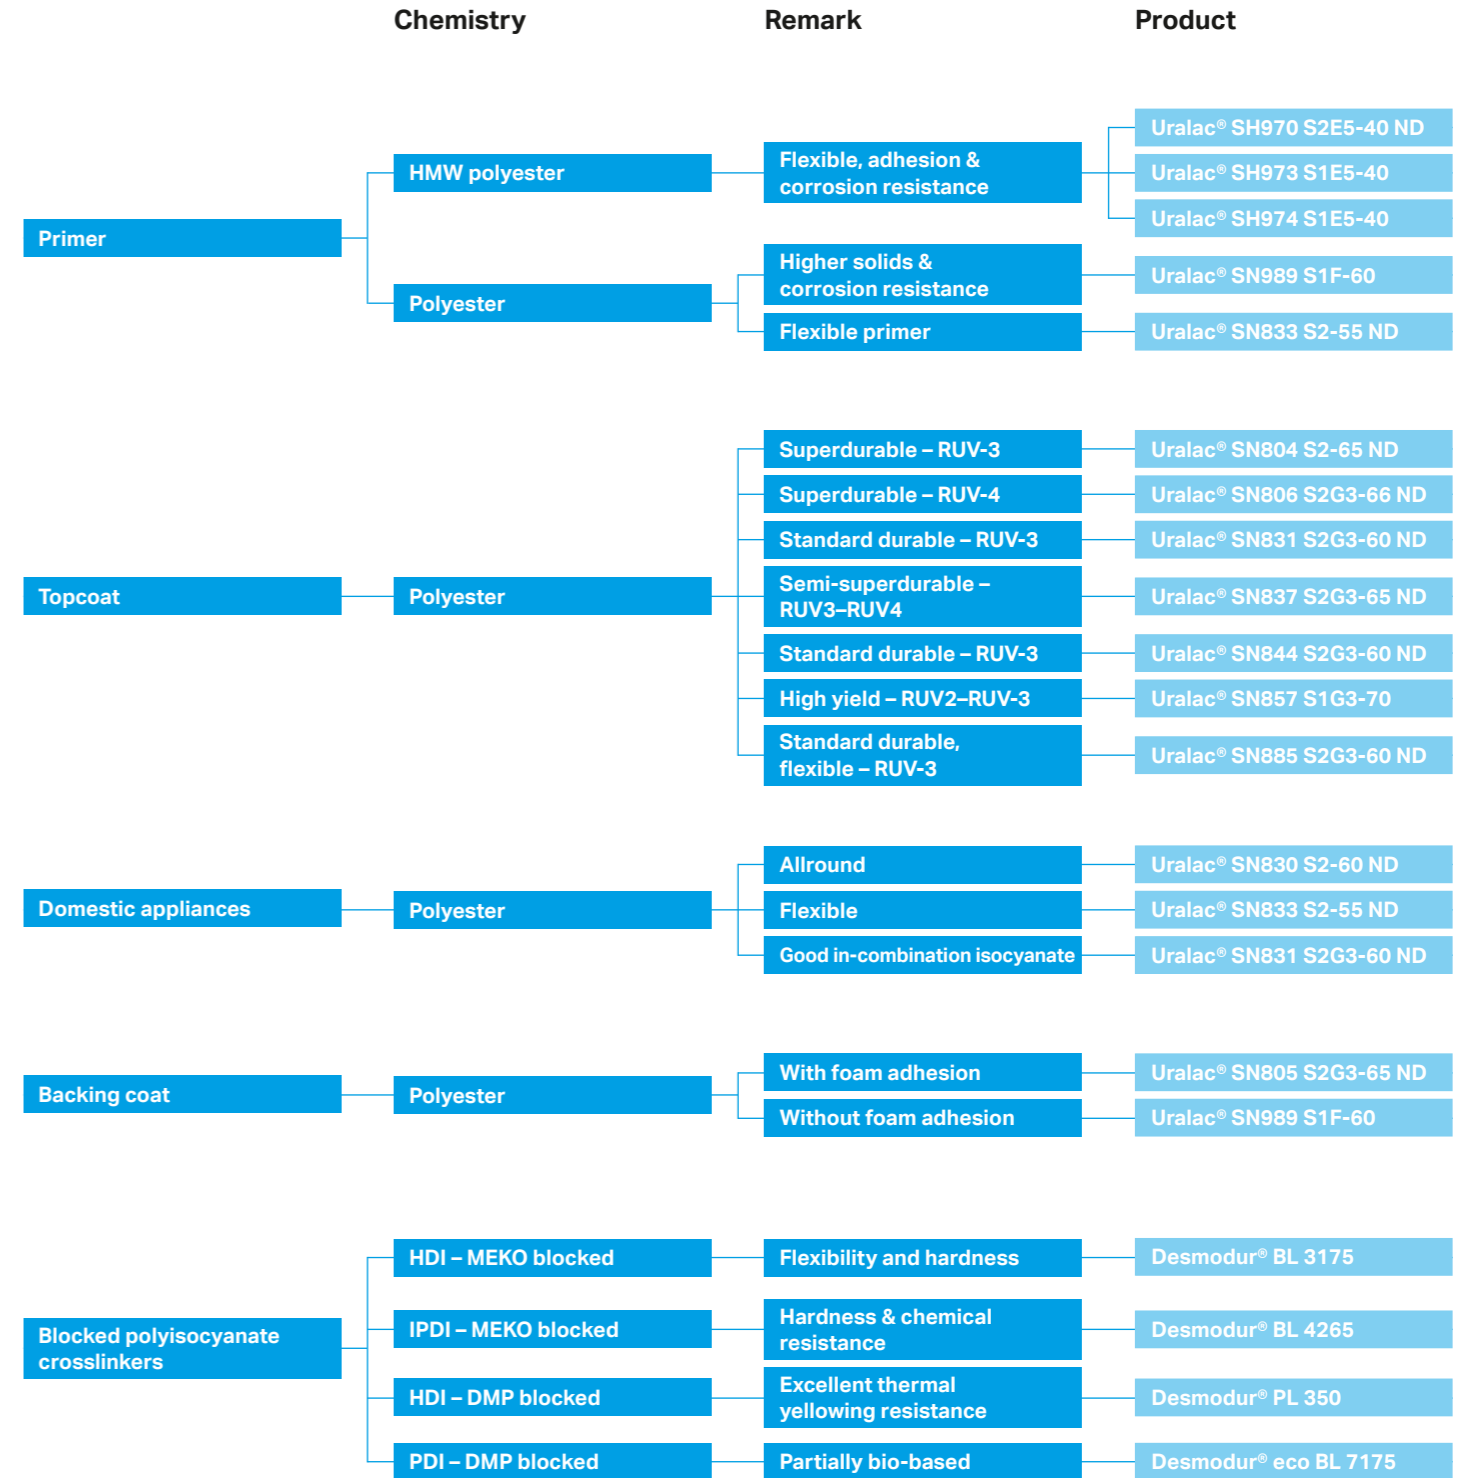

We have long expertise in materials science, applications and in the value chain for metal packaging (can) and pre-coated metal (coil). Our portfolio covers a diverse range of resins and crosslinkers, from solventborne to waterborne, for pre-coated metal applications like construction and facades, and for metal packaging, including interior (food) and exterior can applications. Our broad technology expertise spans polyesters, acrylics, alkyds, and urethane chemistries. Our customer partnerships allow us to efficiently develop new products and improve existing ones to meet your toughest requirements, and do this in a way that's more sustainable. For instance, improved sustainability with enhanced properties like improved durability for facade panels, preferably using more sustainable and renewable building blocks. Offering tailor-made BPA-NI solutions for interior food cans. Sustainability is our main driver, making our products future-proof and prepared for the challenges ahead of us.

Abbreviations

B	branched resin
E5	dibasicester
F	methoxypropylacetate
G	propyleneglycol monomethylether
G3	butylglycol
G4	dipropylene glycol monomethylether
L	linear resin
M1	mixture of solvents
ND	naphthalene depleted
S1	solvent naphta 100
S2	solvent naphta 150 ND
S5	solvent naphta 200 ND
SB	slightly branched resin
W	water
HDI	hexamethylene diisocyanate
IPDI	isophorone diisocyanate
PDI	pentamethylene diisocyanate
MEKO	methylethylketoxime
DMP	dimethylpyrazol
