

Energy curable resins
for inks and coatings.

Building a circular future, together

At Covestro, we use our unique skills in material solutions to make the world a brighter place. We create solutions that nourish, protect, and improve the performance of millions of products all over the globe. At the same time, our solutions contribute to a more circular world. This is reflected in our approach to the Energy Curable Industry.

Leading the way

The demand for more circular solutions is rising at a faster pace than ever before as the world collectively strives to tackle today's global challenges. Climate change, population growth, urbanization, digitalization and mobility are pushing players from every sector to find more sustainable solutions and lay the foundations for climate neutrality by driving a Circular Economy. The challenge is not only to create these circular solutions but also to maintain quality, durability and productivity.

Drive to push boundaries to what is possible

Innovation is key to satisfying these demands and creating added value for customers, society and the environment by turning targets into realities. At Covestro, our long-standing expertise in aliphatic and aromatic polyisocyanates and more sustainable resins goes hand in hand with our purpose to constantly push boundaries in the search for future-oriented solutions. Through joint solutions, alternative raw materials, innovative recycling, and harnessing renewable energy, we're enabling coatings and adhesives producers to meet the circular challenge, here and now.

Our portfolio

We're expanding our portfolio to include bio-based or recycled raw materials in coatings, adhesives, and specialty areas from cosmetics to textiles to 3D printing. Thanks to our mass balancing approach, we're helping close the loop by gradually replacing fossil fuels with ISCC-certified renewable resources. Our drop-in solutions ensure the high quality, consistent performance and easy processing

that keep your production running smoothly. And we're constantly working to provide the global support, facilities and supply chain security you need to forge yet more circular innovations in infrastructure, automotive, furniture and more.

Energy curable resins

Our broad portfolio of Energy Curable Resins consists of monomers, epoxy and polyester acrylates, acrylated and solid acrylics and amine acrylates. All products are sold under the **AgiSyn™**, **NeoRad™** product ranges. The energy curable technology is used in many industrial applications. Nevertheless, it is a technology which still has many opportunities for innovation, not only to improve the performance in existing application areas, but also to take it to new markets.

Material solutions can help turn circular targets into realities. Let's make the world a brighter place, together.

Aliphatic urethane acrylates

Of all the acrylate resins, urethane acrylates possess best balance between hardness, toughness, flexibility, chemical resistance and abrasion resistance. Due to their resistance to weathering and low yellowing, aliphatic urethane acrylates are preferred over aromatic urethane acrylates in high-end applications.

Polyester acrylates

By highly favorable cost-performance ratio and very wide selection of backbone building blocks, polyester acrylates are well suited for a high number of applications. They are available in a range of viscosities and cure speeds. Generally polyester acrylates exhibit moderate to high shrinkage but still provide a well-balanced elasticity.

Epoxy acrylates

Epoxy acrylates are widely used in radiation curable formulations due to their cost-performance ratio combined with high reactivity. Cured coatings comprising of epoxy acrylates generally exhibit high gloss, high hardness and very high chemical resistance. The fatty acid modified epoxy acrylates provide some improved wetting and flexibility.

* AgiSyn™ 1010, AgiSyn™ 1030 and AgiSyn™ 1050 are also available in diluting acrylates. Please contact your local account manager.

Acrylics

Acrylics provide reduced shrink to a coating and achieve improved adhesion. Additionally depending on chemistry and use acrylics provide hardness and flexibility to an energy curable coating system. Inert acrylics are available as a solid material (also known as beads) and as a liquid in diluting acrylates.

Amine modified acrylates

The typical combination of high cure speeds and overall balanced properties makes the amine modified acrylates unique. Often these resins are used to increase the cure speed without compromising on other coating characteristics.

Amine synergists

Amine synergists are co-initiators which enhance the reactivity of UV curable systems. Best performance is achieved when combined with Norrish type II initiators. The acrylate functionality ensures this type of synergist is being incorporated in the final coating structure.

AgiSyn™ 2836	Ethoxylated (3) trimethylolpropane triacrylate 	428	40–80	<0.2		<60	250–500	1.471	37	- Multi purpose acrylate - Good reactivity - Good chemical resistance		2)	✓	✓	✓	✓		
AgiSyn™ 2837	Propoxylated (3) glyceryl triacrylate 	428	70–100	<0.5		<100	200–500	1.461	33	- Multi purpose acrylate - Excellent wetting - Good reactivity		2)	✓	✓	✓	✓		
AgiSyn™ 2844	Ethoxylated (5) pentaerythritol tetraacrylate 	550	100–200	<1.0		<60	200–600	1.475	-33	- High reactivity - Good scratch resistance - Good solvent resistance		2)	✓	-	✓	✓		
AgiSyn™ 2851S	Tris (2-hydroxy ethyl) isocyanurate triacrylate 	423	Wax	<1.0		<100	300–1,200	1.465	247	- Extremely high Tg - Excellent abrasion resistance - Very good heat resistance - High reactivity			✓	✓	-	✓		

1) Also available as Toluene Free version (TF grade)

2) Also available as High Purity version (P grade)

✓ Available

UVR biobased portfolio

Biobased materials are manufactured from renewable sources, natural plant-based sources. The natural carbon (C14) can be measured and quantified versus fossil based carbon (C12). All biobased content in our acrylate resin and diluent products comes from natural sources, which is backed up by certified external analysis. The biobased carbon content is noted as a percentage of total carbon content, not as weight percentage of the total commercial product. More detailed product information can be found on the previous pages.

	DESCRIPTION	BIOBASED CARBON CONTENT	FEATURES		REGIONS			
					USA	CA	EU	CHINA
AgiSyn™ 2020	Epoxidized soya oil acrylate	83%	General purpose resin with excellent wetting properties.		✓	✓	✓	✓
AgiSyn™ 2896	Lauryl acrylate	80%	Low surface tension Good adhesion		✓	✓	✓	✓
AgiSyn™ 2870	Iso bornyl acrylate	79%	High Tg and good flexibility Excellent adhesion to a variety of substrates Good outdoor resistance		✓	✓	✓	✓
AgiSyn™ 2820	2-Octyl acrylate	74%	Low surface tension Good adhesion		✓	-	✓	-
AgiSyn™ 705	Fatty acid modified polyester acrylate	56%	Excellent pigment grinding vehicle.		✓	✓	✓	✓
AgiSyn™ 248	Silky feel urethane acrylate	45%	An innovative, Silky feel, resin to obtain matt overprint varnishes (OPV) for flexo and screen printing.		✓	-	✓	✓
AgiSyn™ 717	Fatty acid modified polyester acrylate	44%	Low odour, low extractable and low viscous grinding resin.		✓	-	✓	-
NeoRad™ U-6282	Easy-To-Matt urethane acrylate	38%	Low yellowing Easy-To-Matt resin offering easy gloss reduction.		✓	✓	✓	✓
NeoCryl® B-302	Solid methacrylic copolymer [inert]	32%	Low viscosity when dissolved in diluting acrylate, high Tg.		✓	✓	✓	✓
NeoRad™ U-81	Aliphatic urethane acrylate	26%	Excellent adhesion to melamine paper and very high elasticity.		-	-	✓	-
AgiSyn™ 720	Polyester acrylate	15%	Very low viscosity, good silica wetting.		✓	-	✓	✓
AgiSyn™ 2837	Propoxylated glyceryl triacrylate	14%	Multi purpose acrylate Excellent wetting Good reactivity		✓	✓	✓	✓
NeoRad™ P-50	Polyester acrylate	13%	Very low viscosity, good silica wetting.		✓	✓	✓	✓
AgiSyn™ 701	Amine modified acrylate	13%	Excellent reactivity, good wetting.		✓	✓	✓	✓
NeoRad™ E-20	Fatty acid modified bisphenol A epoxy acrylate	12%	Multi purpose resin offering good pigment wetting.		✓	✓	-	✓

The manner in which you use our products, technical assistance and information (whether verbal, written or by way of production evaluations), including any suggested formulations and recommendations, is beyond our control. Therefore, it is imperative that you test our products to determine suitability for your processing and intended uses. Your analysis must at least include testing to determine suitability from a technical, health, safety, and environmental and regulatory standpoint. Such testing has not necessarily been done by Covestro, and Covestro has not obtained any approvals or licenses for a particular use or application of the product, unless explicitly stated otherwise. If the intended use of the product is for the manufacture of a pharmaceutical/medicinal product, medical device¹ or of pre-cursor products for medical devices or for other specifically regulated applications which lead or may lead to a regulatory obligation of Covestro, Covestro must explicitly agree to such application before the sale. Any samples provided by Covestro are for testing purposes only and not for commercial use. Unless we otherwise agree in writing, all products are sold strictly pursuant to the terms of our standard conditions of sale which are available upon request. All information, including technical assistance is given without warranty or guarantee and is subject to change without notice. It is expressly understood and agreed by you that you assume and hereby expressly release and indemnify us and hold us harmless from all liability, in tort, contract or otherwise, incurred in connection with the use of our products, technical assistance, and information. Any statement or recommendation not contained herein is unauthorized and shall not bind us. Nothing herein shall be construed as a recommendation to use any product in conflict with any claim of any patent relative to any material or its use. No license is implied or in fact granted under the claims of any patent.

¹Please see the "Guidance on Use of Covestro Products in a Medical Application" document.
