

Covestro Inclusive Business

Scaling material innovation for underserved communities

What if the most critical challenges are the ones we overlook?

The gaps that go unnoticed — but impact millions

≈30% of horticultural produce is lost post-harvest

→ Food that never reaches consumer or farmer's income.

≈25% of fish is lost after catch

→ Results in livelihood loss for fisherfolk

≈194 million people in India remain undernourished — not from lack of production, but lack of systems.

≈119,000 MT of sewage sludge generated daily, largely going untreated

→ Ends up in landfills, waterways, and communities.

Closing the gap — through solutions that work for communities

With our core expertise in Polycarbonate (PC) and Polyurethane (PUR), we co-develop climate-smart solutions with our partners across two critical sectors:

FOOD SECURITY

BIO SOLID MANAGEMENT

With shared value across People, Planet and Profit

PEOPLE

- Farmers and fisherfolk earn more through reduced spoilage, value-added products, and access to premium markets.
- Sanitation workers operate safer, more effective systems.

PLANET

- Solar-powered solutions cut fossil fuel dependence.
- Waste from agricultural and sanitation — are converted into resources, not liabilities.

PROFIT

- Durable, modular designs reduce operational costs and enable replication across diverse geographies — making impact scalable.

Where could Inclusive Business create impact for you?

Let's explore the possibilities in your context - together.
